

# Is There a Long COVID Phenotype?

1688774820

**1688774820**

The study reported in the Open Forum of Infectious Diseases is based on data contained within the Innovative Support For Patients with SARS-Co-V-2 Infectious Registry (INSPIRE), containing patient self-reported symptoms within a few weeks of a COVID test; those individuals could be COVID positive or negative. There were roughly 6,000 participants, 75% of whom had a positive test for COVID before the onset of their symptoms.
